

YASH VIJAY MALI

214-475-4785 | yashmali597@gmail.com | linkedin.com/in/yash-v-mali

AI engineer with 2+ years of production experience designing, building, and deploying agentic AI systems, currently embedded in enterprise AI teams at C.H. Guenther, building agentic platforms and serving as the technical advisor between engineering and business stakeholders. Experienced prototyping and productionizing AI agents using LangChain, LangGraph, and Microsoft Copilot Studio; implementing RAG pipelines with vector stores and retrieval ranking; creating evaluation and observability frameworks for agent accuracy, latency, and failure modes; conducting technical enablement sessions and creating adoption documentation; and troubleshooting AI systems in production environments. Strong communicator who explains complex AI architectures clearly to both technical engineers and non-technical business stakeholders.

EDUCATION

M.S. Information Technology and Management · University of Texas at Dallas - Richardson, TX May 2027

GPA: 3.75/4.0 | Program Excellence Scholarship | Rashmi Malhan Fellowship Recipient - Top 0.1% of all graduate students

Coursework: AI Systems, Machine Learning, Advanced Statistics, Database Foundations, Big Data, Causal Analytics & A/B Testing, Predictive Analytics

B.Tech., Instrumentation Engineering · Vishwakarma Institute of Technology - India May 2024

GPA: 8.77/10.0

TECHNICAL SKILLS

AI Agents & Orchestration: Agentic AI Systems, LangChain, LangGraph, Microsoft Copilot Studio, Multi-Agent Orchestration, Autonomous Planning & Reasoning, Tool Use, Memory Integration, LLMs (OpenAI, Claude, LLaMA), Hugging Face

RAG & Evaluation: RAG Pipelines, Document Ingestion, Chunking, Embeddings, Vector Stores, Retrieval Ranking, Azure AI Search, LLM Evaluation Frameworks, Agent Observability, Accuracy & Latency Benchmarking, Failure Mode Analysis

ML Frameworks & Engineering: Python, PyTorch, TensorFlow, Scikit-learn, XGBoost, FastAPI, REST APIs, SQL, Azure, Azure DevOps CI/CD, Docker, Git, Microsoft Fabric, Power Automate

Customer-Facing & Enablement: Technical Advisory, Architectural Guidance, Reference Implementations, Technical Workshops, Adoption Documentation, Stakeholder Communication, Production Troubleshooting

PROFESSIONAL EXPERIENCE

AI Agents & Automation Intern · C.H. Guenther - San Antonio, TX Jun 2026 – Present

- ▶ Worked with enterprise AI teams to design, prototype, and productionize agentic AI systems, built multi-agent orchestration platform using LangChain, LangGraph, and Azure Foundry integrating enterprise streams; acted as technical advisor to business stakeholders on architectural decisions for agentic workflows
- ▶ Built a Fabric end-to-end pipeline from 6 public APIs through medallion architecture into a semantic model and auto-updating dashboard, with a Fabric Data Agent for natural language querying, saving ~70% of weekly reporting effort
- ▶ Developed an auto-updating pipeline connected to a cost analysis application supporting current and future cost modeling, reducing effort by ~60%
- ▶ Conducted technical enablement sessions and created reference documentation and adoption guides, helping non-technical business staff understand and use AI tools effectively

Graduate Engineering Trainee · Emerson Co. - Pune, India Jan 2024 – Jul 2025

- ▶ Designed and deployed production agentic AI systems with autonomous reasoning and tool use, built LLM-powered agents using LangChain and Azure OpenAI that integrated enterprise knowledge sources and APIs, with evaluation frameworks monitoring accuracy, grounding, and latency, reducing retrieval time by 45%
- ▶ Implemented RAG pipelines with document ingestion, chunking, embeddings, and retrieval ranking, optimized vector store retrieval for production accuracy, built observability for agent failure modes, and iterated on prompt and retrieval strategies to improve grounding
- ▶ Conducted technical workshops and troubleshooting sessions, explained AI system architectures clearly to both technical engineers and non-technical business stakeholders, gathered field feedback to inform tool improvements, and created reference implementations and best practice documentation
- ▶ Built CI/CD pipelines, versioned AI service deployments, implemented runtime safeguards, reduced manual effort by 60% across production workflows

PROJECT EXPERIENCE

BistroBrain – Agentic AI based business analytics platform

- ▶ Built BistroBrain using Claude Code and LangChain, designed a multi-agent orchestration system with tool integration and autonomous workflow execution that generates structured business recommendations from real operational data, demonstrating end-to-end agentic architecture from prompt design through production deployment

ACHIEVEMENT

1st Place - NRF × Arcade Marketing Hackathon: devised an AI-driven strategy under competitive conditions, presenting architectural decisions and measurable impact to judges

3rd Place - Agent-a-thon (Celonis): designed an agentic AI system end-to-end, demonstrating evaluation, troubleshooting, and technical enablement under competitive conditions
